Meet us and see our culinary back office products integrated with TEC POS terminals and third party financial application (QuickBooks) at the National Restaurant Show at McCormick Place, Chicago, May 20-23, 2006.

### **BSI Cater Is Released**

Barrington Software announces the release of BSI Cater, software for planning and scheduling catering events. All the important features caterers need are included:

- Schedule Sub-Events
- Plan Multiple Events for the Same Customer
- Staff Events
- Send your events to your Calendar and carry them on your hand-held device.
- Use Advanced Search capabilities
- 4 Levels of Security
- Interfaced with CookenPro and Room Viewer

Developed by a Catering Professional and used over a period of several years by a medium sized contract catering company, the program is now available with a host of new features including interfaces with CookenPro for inventory control and Room Viewer for designing room configurations.

BSI Cater was designed to accommodate a wide range of catering professionals as demonstrated by the Sample Databases included with the program. Catering contractors, companies, restaurants, hospitals, and hotels can all rely on the completeness and versatility of this program. Also, you do not have to be a technical professional to use BSI Cater. Download a 30-Day Trial at [www.cooken.com/BSICaterDetail.htm](http://www.cooken.com/BSICaterDetail.htm).

### **Did You Know?**

With a click, BSI Cater will collect recipes, menus, pricing, and cost information from CookenPro. You can also send service item sales back to CookenPro, maintaining inventory counts, and then send sales on to QuickBooks.

You are receiving this newsletter either because you are a customer, you have requested information, or you have downloaded software and given us your e-mail address. If for any reason, at any time you no longer wish to receive a newsletter from us, just enter "remove" anyplace in a reply to our e-mail.
